Title : Stimulation of the Uptake of Certain Amino Acids into
the Proteins of Normal and Tumor Tissues by the Decom-
position Products of Ribonucleic Acid

Orig Pub : Dokl. AN SSSR, 1957, 114, № 1, 150-153

Abstract : An alkaline hydrolysate of sodium ribonucleate in a
final concentration of 0.05% increased the uptake of
glycine-C¹⁴ and of methionine-S-35 in the proteins of
liver, spleen and kidney sections of rats (incubation
50 min. at 38° in atmosphere of O₂) by an average of
87%. The ribonucleic acid hydrolysate did not exert
any effect on sections of rat M₁ and 45 sarcomata.

TITLE: New Photo-layers for the Television Camera Tubes with Photo-conductive Targets (Novyye fotosloi dlya peredayushchikh televizionnykh trubok s fotoprovodyashchey mishen'yu)

PERIODICAL: Radiotekhnika i Elektronika, 1958, Vol.III, No.3,
pp. 415 - 420 (USSR).

ABSTRACT: The work is concerned with the application of PbS in the photo-conducting screens in vidicon tubes. During the work on this problem, it was found by the authors that the method of preparation of high-resistance photo-layers devised by Frank and Reithel (Ref.7) was not satisfactory. Consequently, a new method was developed in which PbS photo resistances are deposited on a lead oxide base. The method permits the preparation of photo-layers having resistivities of 10^{11} to 10^{12} Ωcm and a satisfactory sensitivity. The light response of the resulting photo-layers was measured at illuminations ranging from 0.1 to 1 000 lux; the experimental curves are shown in Fig.1 for three different photo-layers. From these, it is seen that the sensitivity of the layers is sufficient to permit the operation of the camera tube at comparatively low illumination levels. The spectral response curves of the photo-layers were taken by means of an infra-red spectrometer, type MKC-11. The resulting curves

Card1/2

109-3-14/23
New Photo-layers for the Television Camera Tubes with Photo-conductive Targets

are shown in Fig.2, where it is seen that the maximum sensitivity occurs at wavelengths of 0.6 to 0.9 μ . The frequency response of the photo layers is illustrated in Fig.3. Also, the excitation time and the decay time of the response of the photo-layers were measured; it was found that these times were lower than 0.1 sec. so that the PbS layers could be regarded as having a comparatively low inertia. Voltage current characteristic and the resistance versus temperature curves of the photo-layers are shown in Figs. 4 and 5, respectively. From these, it is seen that the current is a linear function of voltage. The above experimental results show that the PbS layers can be used to construct camera tubes for operation in the infra-red region. The sensitivity of the layers is such that the tubes would be capable of working over a wide range of illumination, in particular, at comparatively low illuminations. There are 5 figures, 1 table and 7 references, 3 of which are English, 2 German, 1 French and 1 Russian

"Further Observations on DL-p-DI (2-Chloroethyl) Aminophenylalanine Hydrochloride (Sarcolysin) in Comparison with some other Derivatives of the Chloroethylamines"

paper presented at the Symposium on Amino Acids and Peptides with Antimetabolic and Cytotoxic Properties, London, 18th -20th March 1958.

Abst: We report comparative clinical studies on various chloroethylamines made during the last five years at the Clinic of the Inst. of Exptl. Pathology and Therapy of Cancer, Acad. Medical Sci. USSR.

The observation of 425 patients showed that the most interesting compound among those investigated, is sarcolysin (DL-p-DI (2-chloroethyl) aminophenylalanine hydrochloride), which is specially active against testicular seminomas, and to a lesser extent against mixed testicular neoplasms, Ewings tumour, reticulosarcoma, angio-endothelioma, myelomatosis and primary carcinoma of the liver. Dopan (4-methyl-5-di (2-chloroethyl) amino-uracil) and Novembekhin (2-chloropropyl-di (2-chloroethyl) amine hydrochloride) on the other hand resemble more closely other nitrogen mustards and are useful in Hodgkin's disease, chronic myeloid leukemia and to a lesser extent in chronic lymphatic leukemia. It is reasonable to relate the altered spectrum of activity in the case of sarcolysin to the presence of the carrier group, namely, the amino acid phenylalanine.

Melphalan (DL form, 'sarcolysin') is effective especially for seminoma and its metastases, and also for reticulum cell sarcoma, Ewing's sarcoma, malignant endothelioma, primary carcinoma of the liver and bile ducts, thymoma and myeloma. However, seminomata on the basis of a teratoma or teratomata are not influenced. After reduction of the carcinoma, the prospect of cure from surgical

1196

extirpation is improved. In recurrences a second course with this drug may give the same effect as the primary treatment. 4-Methyl-5-[bis(2-chloroethyl)-amino]-uracil ('dopan') is effective for chronic myeloma and Hodgkin's disease. Blood examinations are indispensable while these drugs are being used.

4794. The relationship of Hodgkin's disease and reticulosarcomatosis. Clinical and anatomical data (Russian text) GANINA K. P. and PEREVODCHIKOVA N.Y. Inst. of Exp. Pathol. and Ther. of Cancer, Moscow Vopr. Onkol. 1959, 5/4 (457-462) Illus. 3

In 11 out of 168 patients with Hodgkin's disease, reticulosarcomatosis developed. Clinically this change is characterized by the progressively severe course; all sorts of therapy are of no avail. Morphologically in all the cases studied from their onset, a great predominance of cell proliferation of the reticuloendothelial system was found. At some period of their development these cells showed all signs of malignant growth. Multicentric reticulosaromatous foci appeared in lymphogranulomatous tissue. In fast spreading forms of lymphogranulomatosis, in the initial stages of the disease, histological examination showed changes that were characteristic both of lymphogranulomatosis and reticulosarcomatosis. The authors think that the morphological changes peculiar for reticulo-cell sarcoma can be explained by the characteristic development of the basic process, i.e. lymphogranulomatosis. The transformation of lymphogranulomatosis into reticulosarcomatosis was observed both in patients receiving all sorts of therapy and in those not treated. Thus, it cannot be due to massive chemotherapy.

Title : The Participation of Nuclei of Normal and Neoplastic Cells in
the Synthesis of Proteins, According to Data of an Incorporation of Labeled Amino Acids in Vivo

Orig Pub : Biokhimiya, 1957, 22, No 1-2, 295-304

Abstract : A study was made on the incorporation in vivo, of the radioactivity of methionine S³⁵, glycine-1-C¹⁴ and tyrosine-1-C¹⁴ in the proteins of the liver, kidneys, spleen and the thymus gland. The same procedure was applied to a hepatoma of a mouse C_aH₁, ascitic cancer of Ehrlich, and sarcoma M₁ of a rat, and to the proteins isolated from such in a neutral medium of nuclei, 2-3 hours after the introduction of labeled amino acids to normal rats and to rats and mice with neoplasm. The proteins of the nuclei of normal organs incorporated the radioactivity of labeled amino acids to almost the same extent as

Card : 1/2

32

USSR/General Problems of Pathology. Metabolism

U-5

Abs Jour : Ref Zhur - Biol., No 13, 1958, No 61065

a whole tissue. In the proteins of neoplastic nuclei, radioactivity was by 2-3 times less than in the proteins of the whole tissue of the same tumors. During the fractionation of nuclear proteins, when the organs were normal, the highest radioactivity was observed in the fractions of an acid protein, while in tumors it corresponds to the nucleoprotein fraction, concentrating in the tryptophan of the non histonic protein of this fraction. In the isolation of nuclei in a 1 percent citric acid solution, or in a solution of saccharase, the differences were manifested in a considerably less obvious manner, because of the extraction of proteins in the first case, and because of contamination in the second case. The nucleus takes an active participation in the synthesis of proteins, a disturbance in the incorporation of labeled amino acids in the nuclear proteins demonstrates a damage to the nuclear apparatus of the cells in the tumor. -- I.B. Zbarskiy

877. THE STIMULATION OF PROTEIN BIOSYNTHESIS IN NORMAL AND NEOPLASTIC TISSUES BY THE DEGRADATION PRODUCTS OF RIBONUCLEIC ACID (Russian text) - Perevoshchikova K. A. and Zbarsky I. B. DOKLADY AKAD. NAUK SSSR 1957, 114/1 (150-153) Tables 3

Gale and co-workers have recently shown that nucleic acids and their breakdown products favour the inclusion of labelled amino-acids into protein. In the present experiments, liver, spleen, kidneys and M1 and M45 sarcomas of rats and ascites cells of Ehrlich's mouse carcinoma (in some experiments destroyed by ultrasound or trituration) were used. The samples, incubated in the Warburg apparatus for 50 minutes at 38°C. in oxygen, contained 150-200 sections, 0.1 ml. glycine- I-C^{14} or methionine S^{35} in Robinson's medium, which contained 0.1% glucose in 2 ml. Then 0.3 ml. of a 0.3% hydrolysate of ribonucleic acid was added (controls without hydrolysate), and after termination of the incubation the sample was sedimented with 5% trichloroacetic acid. The nucleic acids were removed by heating for 15 min. at 90°, and the rest treated according to a method described earlier (ibidem, 1957, 107, 285) and the radio-activity of the protein determined with a Geiger counter. The alkaline hydrolysate of ribonucleic acid stimulates definitely the inclusion of glycine C^{14} and methionine S^{35} in protein, in the normal tissue examined as well as in the ascites cells of Ehrlich's mouse carcinoma (also in those destroyed by ultra-sound).

TITLE: Effect of hepatic ribonucleic acid on tumor growth in experimental animals

SOURCE: Byulleten' eksperimental'noy biologii i meditsiny, v. 60, no. 8, 1965,
102-105

TOPIC TAGS: tumor, RNA, liver, rat, mouse

ABSTRACT: Ribonucleic acid was obtained from the livers of rats and mice by means of the modified Kirby phenol and Sherer methods. The acid was placed in physiological solution (3-4 milligrams in one milliliter) and mixed in a ratio of 5:1 with a suspension of N-1 sarcoma cells, Ehrlich's mouse ascitic tumor washed in the above solution, or rat ascitic hepatoma. An equal quantity of physiological solution was added in the case of controls. The mixture with the ribonucleic acid (RNA) (final concentration of the RNA equalled 2.5-3 milligrams in one milliliter) was incubated at room temperature for a period of 2 hours, or at a temperature of 4°C for a period of 18 hours. After incubation the suspension containing sarcoma N-1 was

Card 1/2

UDC: 616-006-085.739.6-092.9

L 23367-66

ACC NR: AP6014004

administered subcutaneously in a dose of one milliliter, and that containing rat ascitic hepatoma, in a similar dose intraperitoneally. The animals were sacrificed within 7-10 days after the inoculation and the tumors of the experimental and control groups were weighed. It was found that the RNA obtained by the Kirby phenol method in modification by G. P. Georgiyev had no effect on the growth of Ehrlich's ascitic tumor; the same was true also of rat sarcoma M-1 preliminarily incubated with RNA of normal livers. A slight tendency to inhibit the growth of rat ascitic hepatoma was noted. Further tests with RNA obtained by the Kirby phenol method modified by Vorob'yev established that the growth of rat sarcoma M-1 was inhibited in 57 to 93 percent of the animals. No definite results were obtained in experiments which sought to determine the effect of RNA obtained by the Kirby phenol method in Vorob'yev modification and the Sherer method on rat ascitic hepatoma. This paper was presented by A. I. Savitskiy, active member, AMN SSSR. "Orig. art. has: 2 tables. [JPRS]

TITLE: Method for electrolytic refining of zirconium in a fused chloride bath.
Class 40, No. 173010

SOURCE: Byulleten' izobreteniy i tovarnykh znakov. no. 14, 1965, 81

TOPIC TAGS: zirconium, zirconium refining, electrolytic refining

ABSTRACT: This Author Certificate introduces a method for electrolytic refining of zirconium in a fused chloride electrolyte containing low-valence zirconium ions. To obtain coarse grained-zirconium cathode deposits, the electrolyte, prior to electrolysis is held in contact with metallic zirconium at the temperature of electrolysis until a valence ratio approaching the equilibrium with metallic zirconium is reached. TITLE: A method for producing ion exchangers. Class 12, No. 170908 15	
SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 10, 1965, 16	
TOPIC TAGS: ion exchanger, chemical production, filler, cotton, fiber	
ABSTRACT: This Author Certificate presents a method for producing ion exchangers by mixing (in a determined order) the combined components, heating, holding, cooling, and consolidating the reactive mass, which is finally crumbled and dried. To improve the mechanical, filtering, and absorption properties of the exchangers, a fibrous <u>filler, such as cotton floss,</u> is introduced into the reactive mixture before drying.

TITLE: Residual stresses in weld joints of aluminum alloys

SOURCE: Alyuminiyevyye splavy, no. 4, 1966. Zharoprochnyye i vysokoprochnyye splavy (Heat resistant and high-strength alloys), 187-191

TOPIC TAGS: tensile stress, compressive stress, aluminum alloy property, weld evaluation

ABSTRACT: The residual stresses in various parts of a welded structure of ATsM alloy were determined by a mechanical method, and the influence of the artificial aging and tempering of the weld joints on the magnitude of these stresses was investigated. It was found that longitudinal residual stresses up to $10-11 \text{ kg/mm}^2$ and compressive residual stresses up to $11-12 \text{ kg/mm}^2$ in the transverse direction arise in the zone of the weld joints. Artificial aging of the weld joints of ATsM alloy for 100 hr at 90° does not change the magnitude and character of the residual stresses in the heat-affected zone as compared to the residual stresses in the naturally aged state. Tempering of the zone of the weld joint by induction heating to $240-250^\circ\text{C}$ for 4-5 min followed by cooling of the heat-affected zone with water increases the magnitude of the

Cord 1/2

L 46965-66

longitudinal tensile residual stresses by $1.5-2 \text{ kg/mm}^2$, without changing the sign.
At the same time, the transverse residual stresses change into compressive ones and
reach 4 kg/mm^2 . Orig. art. has: 2 formulas.

Selection of Rational Hot Stamping Technology for Bevel Gears

3/182/60/000/011/001/016
A161/A029

TITLE:

Kuznechno-shtampovochnoye prizvodstvo, 1960, No. 11, pp.1-6

PERIODICAL:

The ENIKMASH Institute has carried out experiments to select a suitable technology for automatic manufacture of bevel gears at a rate of 500,000 pieces annually. It is emphasized that the results cannot be applied to any other type and size of bevel gears than the type for which the investigation had been undertaken, namely the driven gear of the GAZ-51 automobile rear axle drive (Fig. 1). The following conditions had to be considered: 1) using latest equipment (universal if possible); 2) forgings must have so placed as to make the teeth; 3) the metal surplus on the transfer in the die impressions; 4) maximum possible automation (between operations, transportation, including automatic transfer from one impression to another). It was not possible to experiment with real-size forgings and the model blanks were 2.86 times smaller. The especially designed

Selection of Rational Hot Stamping Technology for Bevel Gears

made die set (Fig. 3) has a bed plate (1), an exchangeable bed die (3) attached to the bed plate with a clamp ring (2), a rotary disk (4) attached to the top plate and bearing three punches. The disk is rotated by hand with a lever inserted into a hole and fixed with the pin (5). The stay (6) fixes the disk additionally during stamping. The punches move rapidly and the blank remains in one bed die. The toothed punches were made with a master tool on a K8621 /K862S press. A set of inserts with exchangeable and mobile elements was prepared for the final choice of the geometric die impression shape (Fig. 4) and lead was used for blank material. The compensator 'space for surplus metal' selected finally is shown (Fig. 4.a). The work efforts necessary for real-size forgings were determined by calculation in accordance with the known law of similarity in the deformation of geometrically similar bodies. Calculated maximum efforts for the 2nd and 3rd stamping passes are shown in sets 1-5 (approximately for gears 184.7 mm in diameter made from 18x1T (18KhGT) steel). The efforts were measured at TsNIITMASH during tests of hot crank presses. (The table

Card 2/9

S/182/60/000/011/001/016
A161/A029

Selection of Rational Hot Stamping Technology for Bevel Gears

includes pressures for lead). The effect of uneven metal distribution in roughing die impressions due to inaccurate placement of the blanks was also investigated and a special device (Fig. 7) was designed for fixing the blank in accurate position until it enters the tapered impressions in the upsetting blocks (1). The device is attached to the die with stays (4). The grips (6) are spring-loaded with tension springs (2) in axial direction and compression springs (3) in vertical direction. The springs (3) work first in the upsetting process and the bushing (5) slides down together with the grips and the blank until the blank enters into the taper in the bottom block. Now the upsetting begins and the grips (6) spread pulling the springs (2). Upset blanks were removed from the device by hand. The device was designed having in view future automatic application. The 6,300-ton crank press KUJN (KGShP) proved suitable for stamping the gears. It is recommended to heat the billet metal for cutting to 600°C in an induction furnace; to heat to forging temperature in a three-groove high-frequency induction heater; to use high annealing for heat treatment utilizing the forging heat (to place the hot forgings immediately after stamping

Selection of Rational Hot Stamping Technology for Bevel Gears

into a furnace with 600-630°C and to hold for 2-2.5 hours and then to cool in air); and to remove scale by shot blasting. The following conclusions are drawn. Stamping of large forgings of similar shape can be recommended for application using four passes (see Fig. 2): 1) upsetting (with the blank fixed and supported in described device); 2) rough stamping; 3) final stamping, punching the hole. The best shapes for the die sort inserts are: 1) for upsetting - a tapered impression in the punch and a tapered cavity in the bed die for the fixing pretrusion; 2) for rough stamping - a punch shape that ensures distribution of the major metal mass on the periphery with unrestricted flow upward of the forging "rim"; 3) for final stamping - a punch shape that insures complete forming of the forging without a periphery burr, the metal flowing into a central compensation cavity that has to be geometrically similar to the cavity chosen in experiments. It is mentioned that a stamping process for real-size gears has been developed after the experiments and decisions have been taken for an automatic process project. The following persons took part in the work: the engineers P.I. Strukov; I.I. Fuks; P.A. Petrov; F.S. Shteyn; T.I. Protopopova

TITLE: Experience in the debugging of low-burr stamping on a 4000-t
NKMZ crank drop forging press

PERIODICAL: Kuznechno-shtampovochnoye proizvodstvo, no. 8, 1961, 41-43

TEXT: This article deals with the debugging of a new "low-burr stamping" process, used for circular forgings, in which the metal instead of forming a circumferential burr flows inwards into the central compensating cavity of the die impression. This consequently saves a great deal of metal. The production of two forgings, i.e. the rear axle reduction gear drive pinions of the Волга(Volga) and the ГАЗ-51(GAZ-51) automobiles was debugged on a 4000-ton НКМЗ(NKMZ) crank drop forging press at the forging department of the Gor'kovskiy avtomobil'nyy zavod (the Gor'kiy Automobile Plant) by workers of that plant and of the ENIKMASH. Forgings reduced 2.86 times were used in the initial stages of the process and the blanks were heated in a gas holding furnace to 1150-1200°C. The Volga rear axle reduction gear drive

Card 1/3

Experience in the debugging of low-burr stamping.. D038/D113

pinion was stamped as follows: upsetting of the blank on hammer heads; transfer of the upset blank into the work counter die; preliminary and final stamping in two press passes with a subsequent feeding of two punches to the counter die by a rotating punch head. The excess of metal during the last draw flowed across an internal burr bridge into the central cavity (compensator) of the punch of the third draw (Fig. 2). The height of the facing burr of the forging did not exceed 2-3 mm. As a result of the experiments, the weight of the blanks decreased compared to those now in use at the plant e.g. the Volga rear axle reduction gear drive pinion decreased by 1 kg, and that of the GAZ-51 by 3.5 kg. The new process is recommended for normal multi-die stamping. It is stated that the debugging of the production process would lower tool and equipment costs, and that the low-burr stamping process only recently attracted the attention of technicians and research workers. The following took part in the work: T.I. Protopopova, Yu.A. Bol'shakov, V.O. Korolev, G.N. Trostyanitser, G.A. Troitskiy and I.I. Devyatov. There are 4 figures, 1 table and 5 Soviet references.

TITLE: Magnetic amplifier with highly linear characteristic

SOURCE: IVUZ. Priborostroyeniye, v. 8, no. 6, 1965, 49-52

TOPIC TAGS: magnetic amplifier, differential amplifier

ABSTRACT: A new single-stage differential magnetic amplifier (see Fig.1) equipped with a resistive-coupled negative feedback and a magnetic positive feedback exhibited high linearity in its input-output characteristic and a higher-than-ordinary input impedance (over 1 Mohm); resistor R_{OOC} connected to the output divider provides the negative feedback. In addition, a weak magnetic negative feedback was introduced to reduce zero-point drift. Measured characteristics are: transadmittance, 10 mamp/V ; nonlinearity, 0.01% or less; drift, $\pm 2 \times 10^{-6} \text{ amp}$ or less; power gain, 4×10^{12} . Magnetic-core and winding data are also reported. Orig. art. has: 2 figures and 1 formula.

industrial frequency with multi-speed asynchronous short-
circuit traction motors. Sbor.LIIZHT no.159:71-91 '58.

(Electric locomotives) (MIRA 12:2)

MAYRCOYZ, Ye.M., kand.med.nauk; PEREVOZNIKOVA, T.I.

Celle of lupus erythematosus and their significance in some
diseases of the internal organs. Vrach.dalo no.2:139 P '63.
(MIRA 16:5)

1. Kafedra gospital'noy terapii (zav. - dotsent Z.Sh. Zagidullin)
Bashkirskogo meditsinskogo instituta.
(LUPUS ERYTHEMATOSUS) (MEDICINE, INTERNAL)

DVOYRIN, M.S.; KRAVCHENKO, S.S.; BEZNOSOVA, Zh. A.; ZAMDBORG, L.F.; CHALYK, M.A.;
~~PEREVOZNIKOVA, Zn.~~ L.; BURLACHENKO, M.A.

Problem of elimination of meningeal tuberculosis in children. Sov. med.
22 no.12;125-130 D '58. (MIRA 12:1)

1. Iz organizatsionno-metodicheskogo otdela (zav. - prof. S.S. Kagan)
Ukrainskogo nauchno-issledovatel'skogo instituta tuberkuleza imeni akad.
P. G. Yanovskogo (dir. - dots. A.S. Mamolat) i Ternopol'skogo, Vinnytskogo,
Chernigovskogo, Kiyevskogo, Chernovitskogo i Stanislavskogo oblast-
nykh protivotuberkulesnykh dispanserov.

(TUBERCULOSIS, MENINGIAL, in inf. & child
prev. (Rus))

BUKHGOL'TS, V.P.; PEREVOZOV, P.S.

Introducing automatic control of mine pumping systems with use
of electrode transducers. Shakht.stroi. no.11:28-31 N '59.
(MIRA 13:3)

1. Institut gornogo dela AN SSSR (for Bukhgol'ts). 2. Shakhta
No.13/15 tresta Shchekinugol' (for Perevozov).
(Mine pumps) (Automatic control)

BUKHGOL'TS, V.P., inzh.; PEREVOZOV, P.S., inzh.

Leakage relay with automatic voltage supply. Besop. truda v prom.
3 no.6:25-27 Je '59. (MIRA 12:10)
(Electric relays) (Electricity in mining---Safety measures.)

PEREVOZOV, V.I.

ZHORZHOLADZE, K.V.; PEREVOZOV, V.I.

Efficient system of condensate return. Sakh.prom. 30 no.9:31-
35 S '56. (MIRA 10:3)

1. Gruzinskiy sakharnyy zavod.
(Sugar industry--Equipment and supplies)

REZNIKOV, I.L.; POLYAKOV, Yu.A.; SOLOV'YEV, Yu.V.; PEREVOZOV, V.N.

Chlorine binding from gases of magnesium production in the
combustion of a hydrogen-bearing fuel spray. TSvet.met. 35
no.8:49-53 Ag '62. (MIRA 15:8)
(Magnesium--Metallurgy) (Chlorine)

KAZANTSEV, Ye.I.; PEREVOZOV, V.N.

Wash out of thorium from sulfocation exchangers. Zhur.prikl.khim. 34
no.7:1448-1456 Jl '61. (MIRA 14:7)

1. Ural'skiy politekhnicheskiy institut imeni S.M.Kirova.
(Thorium) (Ion exchange)

BUROV, Yu.S., kand. tekhn. nauk; MOCHALOV, A.I., laureat Leninskoy premii;
KORABLIMOV, A.M., inzh.; PEREVOZOV, V.S., inzh.; SEMCHENKOVA T.S.,
inzh.

Large products made of autoclaved concrete from carbonaceous
sands. Stroi. mat. 10 no.6:38-40 Je '64. (MCPA 17:10)

1. Direktor Krasnopresnenskogo kombinata stroitel'nykh materialov
(for Mochalov).

CHUYKO, N.M., doktor tekhn.nauk; RUTKOVSKIY, V.B., inzh.; DANICHEK, R.Ye.,
inzh.; PEREYVYAZKO, A.T., inzh.; BORODULIN, G.M., inzh.;
TREGUBENKO, A.F., inzh.; SHAMIL', Yu.P., inzh.; FRANTSOV, V.P.,
inzh.; VOLOVICH, V.G., inzh.; Prinimali uchastiye: IOFFE, I.M.,
inzh.; LAVRENT'YEV, M.I., inzh.; PARKHOMENKO, G.P., inzh.;
DEMIDENKO, V.I., inzh.; RYSIN, Ye.M., inzh.; VOROB'YEVA, T.M., inzh.

Inert gas blowing of metal in the ladle in vacuum. Stal' 22
no.9:809-811 S '62. (MIRA 15:11)
(Vacuum metallurgy) (Protective atmospheres)

CHUYKO, N.M., doktor tekhn.nauk; PEREVYAZKO, A.T.; MOSHKEVICH, Ye.I.;
Prinimali uchastiye: RUTKOVSKIY, V.B.; KONISHCHEV, M.I.;
FRANTSEV, V.P.; DEMIDOV, P.V.

Controlling the gaseous phase composition in an electric furnace
by means of an air curtain. Met. i gornorud. prom. no.2:15-18
Mr-Ap '62. (MIRA 15:11)

1. Dnepropetrovskiy metallurgicheskiy institut (for Chuyko).
2. Dnepropetrovskiy staleplavil'nyy zavod vysokokachestvennykh
i spetsial'nykh stalei (for Perevyazko, Moshkevich).
(Electric furnaces) (Gases--Analysis)

GALITSKIY, Yu.P.; CHUYKO, N.M.; GASIK, M.I.; YEMLIN, B.I.; PEREVYAZKO,
A.T.; BOGDANOVICHENKO, A.G.; MALIKOV, G.P.

Using a thermoelectric silicomenter in the making of transformer
steel. Stal' 23 no. 3:231-232 Mr '64. (MIRA 17:5)

1. Dnepropetrovskiy metallurgicheskiy institut i zavod "Dneprospets-
stal'".
